this penetrating case study of institution building and entrepreneurship in science shows how a minor medical speciality evolved into a large and powerful academic discipline drawing extensively on little used archival sources the author analyses in detail how biomedical science

became a central part of medical training and practice the book shows how biochemistry was defined as a distinct discipline by the programmatic vision of individual biochemists and of patrons and competitors in related disciplines it shows how discipline builders used research programmes as strategies that they adapted to the opportunities offered by changing educational markets and national medical reform movements in the united states britain and germany the author argues that the priorities and styles of various departments and schools of biochemistry reflect systematic social relationships between that discipline and biology chemistry and medicine science is shaped by its service roles in particular local contexts this is the central theme the author s view of the political economy of modern science will be of interest to historians and social scientists scientific and medical practitioners and anyone interested in the ecology of knowledge in scientific institutions and professions

all living things are composed of cells which have fundamentally the same chemistry biochemistry is the study of reactions within these cells and the molecules that are created manipulated and destroyed as a result of them this book discusses the key concepts of biochemistry as well as the recent discoveries and innovations in the field

the 9th jerusalem symposium was dedicated to the memory of professor ernst david bergmann an imposing and deeply moving memorial session chaired by professor ephraim katzir the president of the state of isU rael and a close friend of professor bergmann preceded the symposium itself during this session professor bergmann s personality scienU tific achievements and contributions to the development of his country were described and praised besides president katzir by professor a dvoretzky president of the israel academy of sciences and humanities professor d ginsburg dean of the israel institute of technology in haifa and the author of these lines may i just quote short extracts from these speeches president katzir as we open this ninth in the series of symposia initiated in 1967 it is difficult for me as i am sure for many of ernst bergmann s friends co workers and students to be here without him he was not only a great scientist and a beloved teacher he was one of the most important founders of science in this country to him we owe many institutes and the establishment here of many branches of

science professor dvoretzky ernst bergmann s greatness did not stem from one component overshadowing all the others it was a multifaceted greatness consisting of the harmonious coalescing of seemingly contrasting entities into a wonderful unity
